Experience

CitiusTech (Client: GE HealthCare)

March 2025 – Present

Software Engineer

Mumbai, India

- Developed high-performance, cloud based medical imaging applications for GE HealthCare using typescript, angular, python and fastapi.
- Owned the design and development of reusable Angular UI components for the viewer, including a configurable toolbar and context menus, driving a consistent and scalable user experience across the product.
- Developed a configuration service using Python/FastAPI, PostgreSQL, and RabbitMQ to manage site- and user-level application settings, enabling centralized configuration management across medical imaging workflows.
- Developed Medical imaging tools such as Cobb angle and elliptical ROI measurements, along with geometry-based annotations and Mammography AI/CAD SR parsing and overlay rendering.
- Optimized the image-rendering pipeline, improving first-slice load time by approximately 80% and significantly enhancing initial viewer responsiveness .
- Enabled third-party interoperability by integrating the viewer with external hospital systems such as Epic (EHR), allowing seamless cross-application clinical workflows.
- Integrated an external applications suite into the AWS cloud environment such that they work seamlessly with our application.
- Built an AI-assisted QA workflow using Retrieval-Augmented Generation (RAG) to analyze requirements, evaluate test-case completeness, and identify traceability gaps, helping reduce the product release cycle by 30 days
- Wrote and maintained automated tests using Karma/Jasmine for unit testing and Playwright for end-to-end testing.

NEC Software Solutions

June 2022 – February 2025

Software Engineer (Full Stack)

Mumbai, India

- Developed a cross-platform Housing Management application (web, Android, iOS) using Angular and Ionic, delivering consistent functionality and UI across all platforms.
- Contributed to a web-based medical imaging platform built on the open-source OHIF Viewer (React), and built a companion hybrid mobile app for surgeons using Angular/Ionic.
- Developed Node.js and Express.js REST APIs backed by PostgreSQL and Prisma, implementing data persistence, validation, and application-specific business logic.
- Wrote comprehensive unit tests and collaborated with cross-functional teams of developers, designers, and testers to deliver projects within tight deadlines.

Education

Mumbai University

July 2018 – May 2022

Bachelor of Science in Computer Science

Mumbai, India

Personal Projects

YT AI Companion – On-Device AI Chrome Extension | TypeScript, Gemini Nano, ONNX | [Chrome Web Store](#)

- Built and published a Chrome extension that transforms YouTube videos into interactive learning experiences through AI-generated summaries, quizzes, and multi-turn question answering grounded in video transcripts.
- Designed the AI workflow for fully on-device execution using Chrome's built-in Gemini Nano, local embeddings, and ONNX Runtime, eliminating the need to send transcript data to external servers.
- Designed the extension around privacy-first execution, requiring no external API keys and no server-side storage of user transcript data.

Technical Skills

Languages: TypeScript, JavaScript, Python, Rust, SQL

Frameworks: Angular, React.js, Ionic, Node.js, Express.js, PyTorch , fastapi

DevOps: Aws , Docker , Git , kubernetes , linux

Other: RAG, Vector Databases, DICOM

Certification: [Deep Learning Specialization](#) – DeepLearning.AI (Coursera)
